Using This Catalogue

This catalogue has been designed to make it as easy as possible for you to make the correct product identification for your vehicles and applications. The most reliable method of identification is to use the Cross Reference section (Section 6). Although it is always advisable to match the physical features of your caliper against the Buyers Guide (Section 5). All application details are provided as guidance only as vehicle and trailer manufacturers may change caliper fitments without notice.

Comment utiliser ce catalogue

Le présent catalogue a été conçu pour vous faciliter le plus possible l'identification du bon produit pour vos véhicules et applications. La méthode la plus fiable en termes d'identification consiste à vous reporter à la section Références Croisées (Section 6). Cela dit, il est toujours conseillé de vérifier les caractéristiques physiques de vos étriers dans le Guide de l'Acheteur (Section 5). Tous les détails relatifs aux applications qui s'y trouvent le sont à titre d'orientation uniquement, puisque les fabricants de véhicules et remorques peuvent modifier sans avis préalable les éléments équipant leurs étriers.

Nutzung dieses Katalogs

Dieser Katalog soll dazu dienen, es Ihnen so leicht wie möglich zu machen, die richtige Produkt-Identifizierung für Ihre Fahrzeuge und Anwendungen vorzunehmen. Die zuverlässigste Methode der Identifizierung ist die Nutzung der Umschlüsselung (Abschnitt 6). Allerdings ist es immer ratsam, die techischen Merkmale Ihres Bremssattels mit der Anleitung (Abschnitt 5) gegenzuprüfen. Alle Einzelheiten der Anwendung werden nur zur Orientierung bereitgestellt, da Fahrzeug- und Anhängerhersteller die Ausstattung ihrer Bremssättel unangekündigt ändern könnten.

Come usare questo catalogo

Il presente catalogo è stato realizzato allo scopo di semplificare il più possibile l'identificazione del prodotto adeguato per il vostro veicolo e per la relativa applicazione. Il metodo di identificazione più affidabile è quello che fa ricorso alla sezione delle trascodifiche (Sezione 6). Ad ogni modo, consigliamo sempre di verificare le caratteristiche fisiche delle vostre pinze freno facendo riferimento alla Guida agli Acquisti (Sezione 5). Tutti i dettagli relativi alle applicazioni vengono forniti a mero titolo indicativo, in quanto i produttori dei veicoli e dei rimorchi potrebbero modificare senza preavviso il montaggio delle pinze freno.

Deze catalogus gebruiken

Deze catalogus werd samengesteld om het u zo gemakkelijk mogelijk te maken om de producten voor uw voertuigen en toepassingen juist te identificeren. De meest betrouwbare identificatiemethode zijn de kruisverwijzingen (hoofdstuk 6), hoewel het altijd raadzaam is de fysieke eigenschappen van uw remklauw te vergelijken met de Kopersgids (hoofdstuk 5). Alle toepassingsgegevens worden enkel bij wijze van informatie verschaft, aangezien de fabrikanten van voertuigen en opleggers remklauwonderdelen zonder voorafgaande kennisgeving kunnen wijzigen.

Cómo consultar este catálogo

Este catálogo ha sido diseñado para facilitarle la identificación del producto adecuado para sus vehículos y aplicaciones. El método más fiable de identificación es utilizar la sección Referencias Cruzadas (Sección 6). Asimismo, es recomendable comprobar las características físicas de su pinza en la Guía del Comprador (Sección 5) para garantizar su compatibilidad. Los datos de las aplicaciones se proporcionan a modo orientativo, ya que los fabricantes de vehículos y semirremolques pueden modificar los datos de instalación de las pinzas sin previo aviso.

Korzystanie z tego Katalogu

Niniejszy katalog został zaprojektowany tak, aby mieli Państwo bardzo prosty i szybki dostęp do poprawnej identyfikacji produktów i ich odpowiedniego zastosowania w pojazdach. Najwiarygodniejszą metodą identyfikacji jest skorzystanie z Działu Zamienników (Rozdział 6). Niemniej jednak, radzimy zawsze dopasować swój zacisk używając wskazówek zawartych w Przewodniku Konsumenta (Rozdział 5). Wszystkie szczegóły dotyczące wymiany i montażu zacisku są zgodne z wytycznymi producentów samochodów i naczep.

Использование данного каталога

Этот каталог был разработан, чтобы упростить идентификацию правильной продукции для вашего автомобиля или необходимого применения. Самый надежный способ идентификации — это раздел таблиц соответствия (раздел 6). Также мы рекомендуем сравнить физические характеристики вашего суппорта с “Инструкциями для покупателя” (раздел 5). Все подробности о применение указываются только в качестве справочника, так как производители автомобиля или прицепа могут изменить, без предварительного уведомления, оборудование суппорта.

Como utilizar este catálogo

Este catálogo foi criado para facilitar o mais possível a identificação dos produtos para os seus veículos e aplicações. O método de identificação mais fiável é utilizar a secção Referência Cruzada (Secção 6). Embora seja sempre aconselhável comparar as características físicas das suas pinças de travões com o Guia do Comprador (Secção 5). Todas as indicações servem apenas de orientação, visto que os fabricantes do veículo e do reboque podem alterar as especificações em qualquer altura sem aviso prévio.

KNORR POTENTIOMETERS

Many Knorr calipers are fitted with a potentiometer to measure pad wear. There are three basic types:

‘On-Off’ – Simply sends a signal to indicate if the brake pad is ‘good’ or ‘bad’.

‘Continuous’ – Sends a continuous signal to show the amount of wear on the brake pad.

MAN ‘Continuous MAN’ – As above but specifically for MAN, Neoplan and some ERF applications. These may also be used on some bus applications where an MAN/Neoplan bus chassis has been used.

These different types of potentiometer are not interchangeable, and failure to use a caliper with the correct potentiometer for the application could cause problems with the vehicle EBS warning system.

The safest method of identification to use the manufacturer references from the caliper and cross reference them to identify the correct replacement caliper. If you are unable to do this, the potentiometers can be identified as follows:

'On-Off' – The potentiometer is fitted with only two wires (usually red/pink & white)

'Continuous' – The potentiometer is fitted with three wires (usually red/pink, white and yellow). The three potentiometer pins are silver in colour.

MAN 'Continuous MAN' – The potentiometer is fitted with three wires (usually red/pink, white and yellow. The three potentiometer pins are gold in colour.

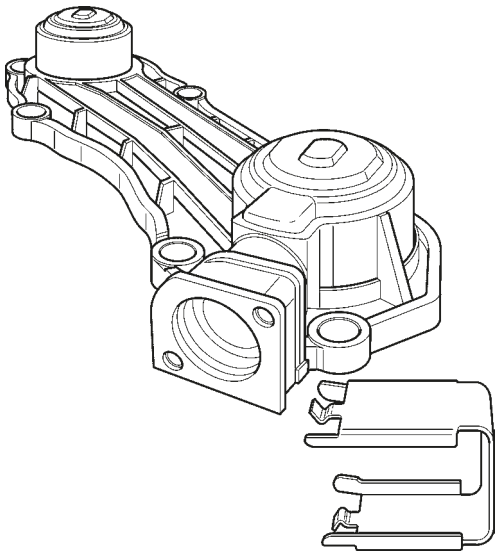
POTENTIOMETER COVER

There are two methods of retaining the potentiometer connection on Knorr caliper:

'Screw Type'

'Clip Type'

Knorr calipers remanufactured by Meritor now come with a Universal potentiometer cover which is suitable for servicing both types.



This catalogue shows the original designation of 'Screw' or 'Clip' type to ensure that you are able to correctly identify applications for units you may already have in stock.

Identification de l'étrier

Les notes ci-dessous visent à vous aider à identifier le bon étrier, celui qui est adapté à votre application. Consultez toujours le Guide de l'Acheteur (Page 63) pour vérifier que l'étrier de remplacement que vous choisissez s'adapte parfaitement à vos besoins.

POTENTIOMÈTRES KNORR

Bon nombre d'étriers Knorr sont munis d'un potentiomètre permettant de mesurer l'usure des plaquettes. Il en existe de trois sortes :

'On-Off' – Le potentiomètre envoie simplement un signal indiquant si la plaquette de frein est en 'bon' ou en 'mauvais' état.

'Continu' – Le signal envoyé indique le degré d'usure de la plaquette de frein.

MAN 'Continu MAN' – Comme précédemment, mais plus spécifiquement pour les applications MAN, Neoplan et certaines applications ERF. Certaines applications de bus peuvent aussi être concernées, lorsqu'un châssis MAN/Neoplan a été employé.

Ces différents types de potentiomètre ne sont pas interchangeables, et utiliser un étrier muni d'un potentiomètre inadéquat pour l'application désirée peut entraîner des problèmes au niveau du système d'avertissement EBS du véhicule.

La méthode d'identification la plus sûre consiste à consulter les références du fabricant sur les étriers et à procéder par référence croisée de sorte à trouver l'étrier de rechange adéquat. Si vous éprouvez des difficultés à le faire, les potentiomètres peuvent être identifiés comme suit :

'On-Off' – Le potentiomètre installé ne présente que deux fils (en principe rouge/rose et blanc)

Continu' – Le potentiomètre est muni de trois fils (en principe rouge/rose, blanc et jaune). Les trois broches du potentiomètre sont de couleur argentée.

MAN 'Continu MAN' – Le potentiomètre est muni de trois fils (en principe rouge/rose, blanc et jaune). Les trois broches du potentiomètre sont de couleur dorée.

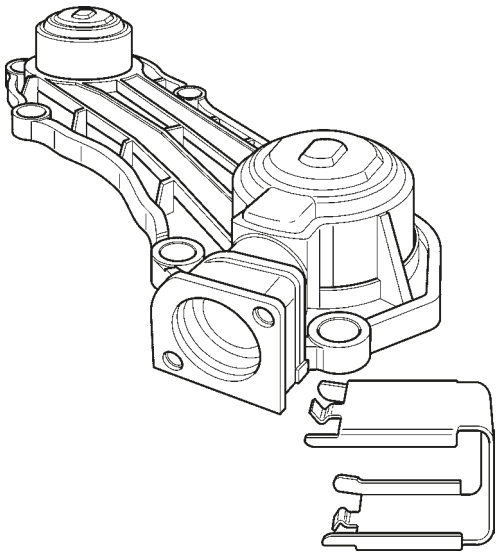
COUVERCLE DU POTENTIOMÈTRE

Il existe deux modes de maintien de la connexion du potentiomètre sur les étriers Knorr :

'de type à visser'

'de type à clipser'

Les étriers Knorr rénovés par Meritor sont désormais pourvus d'un couvercle universel adapté aux deux types de potentiomètres.



Le présent catalogue vous présente la description d'origine des types 'à visser' ou 'à clipser' pour vous permettre d'identifier sans risque d'erreur les applications adaptées aux unités que vous avez peut-être déjà en stock.

Bremssattel-Identifikation

Die unten stehenden Anmerkungen sollen Ihnen helfen, den richtigen Bremssattel für Ihre Anwendung zu finden. Beziehen Sie sich immer auf die Käuferanleitung (Seite 63), um zu gewährleisten, dass der Ersatz-Bremssattel genau Ihren Anforderungen entspricht.

KNORR POTENTIOMETER

Viele Knorr-Bremssättel sind mit einem Potentiometer ausgestattet, um den Belagverschleiß zu messen. Es gibt drei Grundtypen:

‘Ein-Aus – Sendet einfach ein Signal, um anzuzeigen, ob der Bremsbelag ‘gut’ oder ‘schlecht’ ist.

‘Durchgehend’ – Sendet ein durchgehendes Signal, um das Ausmaß des Verschleißes am Bremsbelag zu zeigen.

MAN ‘Durchgehend MAN’ – Wie oben, doch spezifisch für MAN, Neoplan und einige ERF-Anwendungen. Diese können auch bei einigen Bus-Anwendungen benutzt werden, bei denen ein Busfahrgestell von MAN/Neoplan verwendet wurde.

Diese verschiedenen Arten von Potentiometer sind nicht austauschbar, und wenn Sie einen Bremssattel ohne das richtige Potentiometer für die Anwendung benutzen, kann dies zu Problemen mit dem EBS-Warnsystem des Fahrzeugs führen.

Die sicherste Methode der Identifikation ist die Verwendung der Hersteller-Referenzen des Bremssattels und deren Nutzung als Querverweis zur Identifizierung des richtigen Austausch-Bremssattels. Wenn dies nicht möglich ist, können die Potentiometer wie folgt identifiziert werden:

‘Ein-Aus’ – Das Potentiometer ist nur mit zwei Drähten ausgestattet (normalerweise rot/rosa & weiß)

‘Durchgehend’ – Das Potentiometer ist mit drei Drähten ausgestattet (normalerweise rot/rosa, weiß und gelb). The drei potentiometer pins sind silver in colour.

MAN ‘Durchgehend MAN’ – Das Potentiometer ist mit drei Drähten ausgestattet (normalerweise rot/rosa, weiß und gelb. Die drei Potentiometer-Stifte sind goldfarben.

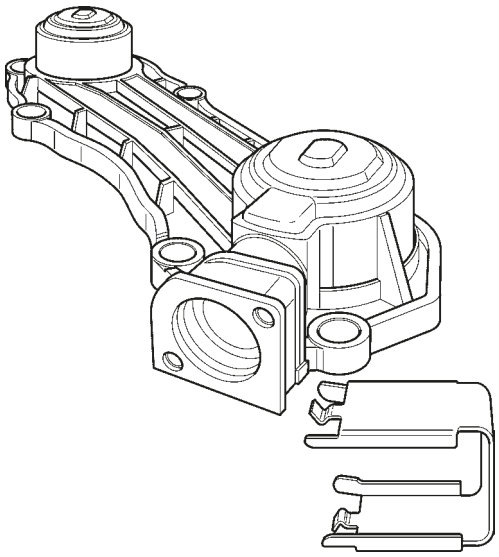
POTENTIOMETERDECKEL

Es gibt zwei Methoden, den Potentiometer-Anschluss beim Knorr-Bremssattel zu erhalten:

‘Schrauben-Typ’

‘Clip-Typ’

Knorr-Bremssättel, wiederaufgearbeitet von Meritor, sind jetzt mit einem Universal-Potentiometerdeckel ausgestattet, der für beide Typen passt.



Dieser Katalog zeigt die Originalbezeichnung des ‘Schrauben’- oder ‘Clip’-Typs, um zu gewährleisten, dass Sie die Anwendungen für die Teile, die sie vielleicht schon auf Lager haben, richtig identifizieren können.

Identificativo pinza freno

Le note che seguono aiutano nell'identificazione della pinza freno più adatta alla vostra applicazione. Raccomandiamo di fare sempre riferimento alla Guida agli Acquisti (pagina 63) per assicurarvi che la pinza freno di ricambio soddisfi perfettamente i vostri requisiti.

POTENZIOMETRI KNORR

Molte pinze freno Knorr vengono installate con un potenziometro per misurare l'usura delle pastiglie freno. Sono tre i modelli di base disponibili:

- "On-Off" – Invia semplicemente un segnale per indicare se la pastiglia dei freni è in "buono" o "cattivo" stato.
- "Continuo" – Invia un messaggio continuo, mostrando il livello di usura della pastiglia freno.
- **MAN** "Continuo MAN" – Come sopra, ma specifico per applicazioni MAN, Neoplan e alcune applicazioni ERF. In alcuni casi, questo tipo di potenziometro può essere installato anche su autobus con telai MAN/Neoplan.

Questi tipi di potenziometri non sono intercambiabili tra loro, e se si usa una pinza freno con potenziometro non adatto all'applicazione specifica si rischia di avere problemi con il sistema di avviso EBS del veicolo.

Il modo più sicuro è utilizzare i riferimenti del produttore della pinza freno per ottenere un riferimento incrociato, ed identificare la pinza freno di ricambio adeguata. Se non si è in grado di agire in questo modo, si può identificare il potenziometro come segue:

"On-Off" – Il potenziometro è montato con solo due fili (in genere rosso/rosa e bianco)

"Continuo" – Il potenziometro è montato con tre fili (in genere rosso/rosa, bianco e giallo) I tre terminali del potenziometro sono color argento.

MAN "Continuo MAN" – Il potenziometro è montato con tre fili (in genere rosso/rosa, bianco e giallo). I tre terminali del potenziometro sono dorati.

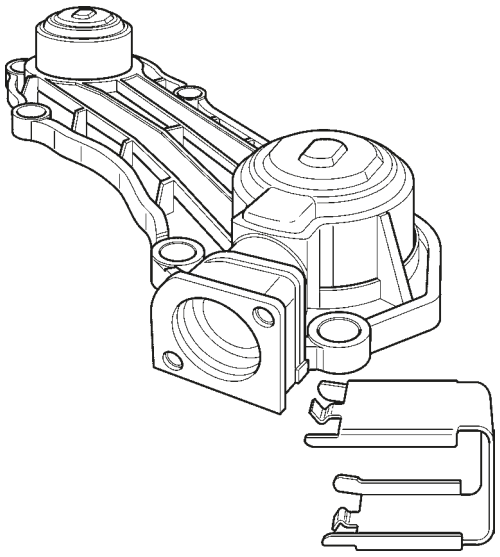
COPERCHIO DEL POTENZIOMETRO

Esistono due possibili collegamenti per fissare il potenziometro alle pinze freno Knorr:

"A vite"

"A scatto"

Le pinze freno Knorr rigenerate da Meritor hanno ora un coperchio universale per il potenziometro, che è adatto in entrambi i casi.



Il presente catalogo mostra l''indicazione originaria di "a Vite" o "a Scatto" per essere certi che identifichiate nel modo corretto le applicazioni per le unità che potreste già avere in magazzino.

Remklauwidentificatie

De onderstaande informatie is samengesteld om u te helpen de juiste remklauw voor uw toepassing te identificeren. Raadpleeg steeds de Kopersgids (pagina 63) om te waarborgen dat de vervangingsremklauw precies voldoet aan uw eisen.

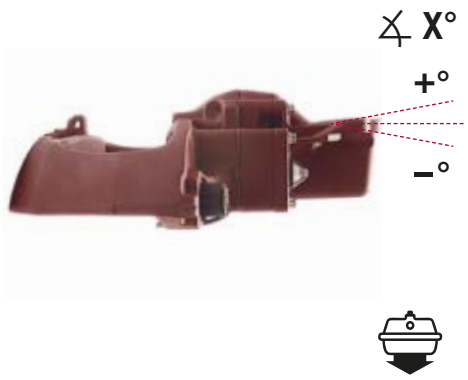
Knorr Bremse Application – Radial Calipers



KNORR POTENTIOMETERS

Veel Knorr remklauwen zijn voorzien van een potentiometer om de slijtage van het remblok te meten. Er zijn drie basistypes:

‘Aan-Uit’ – Verstuurt gewoon een signaal om aan te geven of het remblok zich in ‘goede’ of ‘slechte’ staat bevindt.

‘Permanent’ – Verstuurt een permanent signaal om de graad van slijtage van het remblok aan te geven.

MAN ‘Permanent MAN’ – Idem als hierboven maar specifiek voor MAN, Neoplan en sommige ERF toepassingen. Deze kunnen ook worden gebruikt voor bepaalde bustoepassingen waarbij een MAN/Neoplan buschassis werd gebruikt.

Deze verschillende types potentiometer zijn niet onderling verwisselbaar en het niet gebruiken van een remklauw met de juiste potentiometer voor de toepassing kan problemen veroorzaken met het EBS waarschuwingssysteem van het voertuig.

De veiligste identificatiewijze is de referenties van de remklauwfabrikant te gebruiken en deze te kruisen om de juiste vervangingsremklauw te identificeren. Als u zich hiertoe niet in de mogelijkheid bevindt, kunt u de potentiometers als volgt identificeren:

‘Aan-Uit’ – De potentiometer is voorzien van slechts twee kabels (doorgaans rood/roze en wit)

‘Permanent’ – De potentiometer is voorzien van drie kabels (doorgaans rood/roze, wit en geel). De drie potentiometerpennen zijn zilverkleurig.

MAN ‘Permanent MAN’ – De potentiometer is voorzien van drie kabels (doorgaans rood/roze, wit en geel. De drie potentiometerpennen zijn goudkleurig.

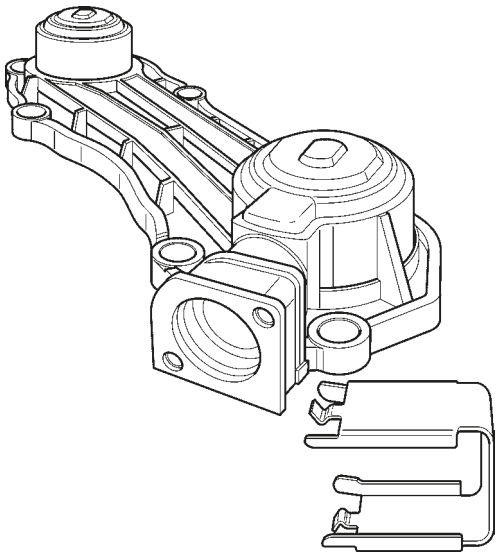
AFDEKKING POTENTIOMETER

Er zijn twee manieren om de potentiometeraansluiting op de Knorr remklauw te vast te zetten:

‘Schroeftype’

‘Klemtype’

De door Meritor vervaardigde Knorr remklauwen zijn nu voorzien van een universele potentiometerafdekking die geschikt is voor beide types.



In deze catalogus wordt de oorspronkelijke benaming, nl ‘schroeftype’ of ‘klemtype’ aangegeven om te waarborgen dat u de toepassingen correct kunt identificeren voor eenheden die u mogelijk reeds in voorraad hebt.

Identificación de pinza

El objetivo de las notas que se proporcionan a continuación es ayudarle a identificar la pinza correcta para su aplicación. Consulte siempre la Guía del comprador (página 63) para asegurarse de que la pinza de sustitución se adapta con precisión a sus requisitos.

POTENCIÓMETROS KNORR

Muchas pinzas Knorr incorporan un potenciómetro que permite medir el desgaste de la pastilla. Existen tres tipos básicos:

- “On-Off”: envía una señal para indicar si la pastilla de freno está en buen o mal estado.
- Continuo: envía una señal continua que indica el desgaste exacto de la pastilla de freno.
- **MAN** Continuo MAN: el mismo tipo que el anterior, aunque específico para MAN, Neoplan y determinadas aplicaciones de ERF. También pueden utilizarse en algunas aplicaciones para autobuses que usan un chasis de autobús de MAN/ Neoplan.

Estos tres tipos de potenciómetro no son intercambiables. Por ello, el uso de una pinza con un potenciómetro inadecuado para la aplicación puede provocar problemas en el sistema de alerta EBS del vehículo.

La manera más segura de identificación es utilizar las referencias del fabricante de la pinza y buscar la referencia cruzada con el fin de determinar cuál es la pinza de sustitución correcta. En caso de no poder consultar estas referencias, puede identificar el potenciómetro de la siguiente manera:

On-Off: el potenciómetro cuenta con dos cables solamente (normalmente rojo/rosa y blanco)

Continuo: el potenciómetro cuenta con tres cables (normalmente rojo/rosa, blanco y amarillo). Las tres patillas del potenciómetro son plateadas.

MAN Continuo MAN: el potenciómetro cuenta con tres cables (normalmente rojo/rosa, blanco y amarillo). Las tres patillas del potenciómetro son doradas.

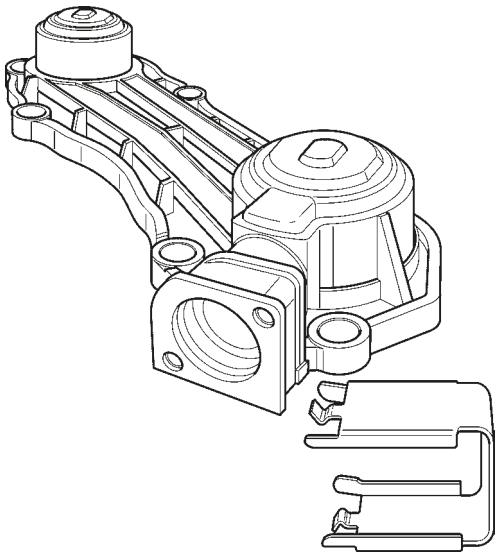
TAPA DEL POTENCIÓMETRO

Existen dos formas de sujetar la conexión del potenciómetro a la pinza Knorr:

A rosca

De tipo abrazadera

Las pinzas Knorr remanufacturadas por Meritor ahora se suministran con una tapa de potenciómetro universal que se adapta a ambos tipos.



El catálogo muestra la designación original “a rosca” o “de tipo abrazadera” para ayudarle a identificar correctamente las aplicaciones adecuadas para las unidades que puede tener en existencias.

Identyfikacja zacisku

Poniższe uwagi mają na celu pomóc w rozpoznaniu właściwego zacisku dla danego zastosowania. W tym celu należy odnieść się do Przewodnika Klienta (strona 63), aby upewnić się, że wymieniany zacisk odpowiada Twoim wymaganiom.

POTENCJOMETRY FIRMY KNORR

Wiele zacisków firmy Knorr wyposażonych jest w potencjometr do pomiaru zużycia klocków hamulcowych.
Istnieją trzy podstawowe typy:

‘On-Off’ – wysyła sygnał wskazujący czy klocek hamulcowy jest “dobry” czy “zły”.

‘Stały’ – wysyła stały sygnał wskazujący obecny stan zużycia hamulców.

MAN ‘Stały MAN’ – wysyła stały sygnał wskazujący obecny stan zużycia hamulców stosowanych w pojazdach MAN, Neoplan i niektórych ERF. Może również mieć zastosowanie w niektórych autobusach MAN/Neoplan ze specjalnym podwoziem autobusowym.

Tego rodzaju potencjometry nie są wymienne i niezastosowanie suwmiarki z odpowiednim potencjometrem może spowodować zakłócenia systemu ostrzegawczego w pojazdach EBS.

Najbezpieczniejszą metodą prawidłowej identyfikacji zastępczego zacisku jest użycie wskazówek producenta zacisku i jego zamienników. Jeśli nie jesteś w stanie tego zrobić, mogą pomóc ci następujące wskazówki:

'On-Off' – Potencjometr wyposażony jest wyłącznie w dwa przewody (zwykle czerwony/różowy i biały).

'Stały' – Potencjometr wyposażony jest w trzy przewody (zwykle czerwony/różowy, biały i żółty). Trzy zawleczki potencjometru są w kolorze srebrnym.

MAN 'Stały MAN' – Potencjometr wyposażony jest w trzy przewody (zwykle czerwony/różowy, biały i żółty). Trzy zawleczki potencjometru są w kolorze złotym.

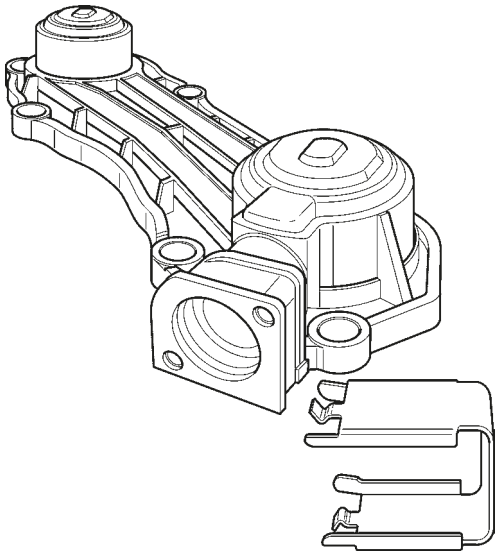
POKRYWA POTENCJOMETRU

Istnieją dwie metody utrzymania połączenia potencjometru na zacisku firmy Knorr:

'poprzez typ śruby'

'poprzez typ klipu'

Zaciski Knorr regenerowane przez firmę Meritor posiadają obecnie uniwersalną pokrywę potencjometru, która obsługuje oba typy wyżej wymienione.



Ten katalog zawiera oryginalne oznaczenia zarówno "Śrub", jak i "Klipów" zapewniając tym samym o prawidłowej identyfikacji i zastosowania urządzeń, które posiadasz obecnie w swoim magazynie.

Идентификация суппорта

Приведенные ниже замечания помогут Вам определить правильный суппорт. Всегда смотрите Инструкции для покупателя (страница 63), чтобы убедиться, что сменный суппорт точно соответствует требованиям.

ПОТЕНЦИОМЕТРЫ KNORR

Многие суппорты Knorr оснащены потенциометром для измерения износа колодок. Существует три основных типа:

- “Вкл/Выкл”: просто посылает сигнал, указывающий если тормозные колодки в “хорошем” или “плохом” состояние.
- “Непрерывный”: посылает непрерывный сигнал, который показывает степень износа тормозных колодок.
- **MAN** “Непрерывный MAN”: Как указанный выше, но специально для автомобилей MAN, Neoplan и некоторые от ERF. Также можно использовать в некоторых автобусах, с шасси от MAN/Neoplan.

Эти разные типы потенциометра не являются взаимозаменяемыми, и неиспользование суппорта с правильным потенциометром может вызвать проблемы с автомобильной системой предупреждения EBS.

Самый безопасный метод идентификации — использование литературы производителя суппорта и таблицы соответствия, чтобы определить правильный суппорт. Если вы неспособны сделать это, потенциометры можно определить следующим образом:

“Вкл/Выкл”: потенциометр оснащен только двумя проводами (обычно красный/розовый и белый).

“Непрерывный”: потенциометр оснащен тремя проводами (обычно красный/розовый, белый и желтый). Три контакта потенциометра серебряного цвета.

MAN “Непрерывный MAN”: потенциометр оснащен тремя проводами (обычно красный/розовый, белый и желтый). Три контакта потенциометра золотистого цвета.

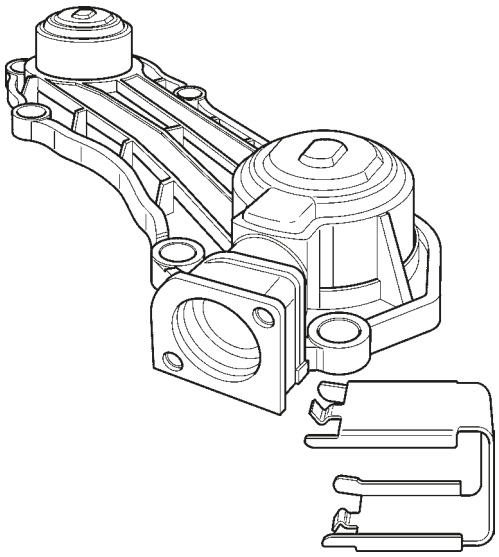
КРЫШКА ПОТЕНЦИОМЕТРА

Существует два вида фиксирования соединения потенциометра на суппорте от Knorr:

“Ввинчиваемого типа”

“В виде скобы”

Суппорты Knorr, восстановленные Meritor, теперь поставляются с универсальной крышкой потенциометра, которая подходит для обслуживания обоих типов.



В этом каталоге указывается оригинальное обозначение “ввинчиваемого типа” или “в виде скобы”, чтобы убедиться, что Вы правильно определите приложения для устройств, которые, возможно, вы имеете в наличии.

Identificação da pinça do travão

As notas abaixo servem para o ajudar a identificar a pinça do travão correcta para a aplicação que pretende. Refira sempre o Guia do Comprador (Pág. 63) para que a pinça do travão que quer substituir seja exatamente a que pretende.

POTENCIÓMETROS KNORR

Muitas pinças de travão Knorr vêm equipadas com um potenciómetro para medir o desgaste da pastilha. Existem três tipos básicos:

- “On-Off” - Simplesmente envia um sinal para indicar se a pastilha do travão está “boa” ou “má”.
- “Contínuo” - Envia um sinal contínuo para mostrar a percentagem de desgaste da pastilha.
- **MAN** “MAN contínuo” - Como acima, mas especificamente para a marca MAN, Neoplan e algumas aplicações ERF. Podem ser também usados em algumas aplicações de autocarros onde seja utilizado um chassis MAN/Neoplan.

Estes diferentes tipos de potenciómetros não são intercambiáveis e a não utilização de uma pinça de travão com o potenciómetro correcto para a aplicação pretendida pode originar problemas com o sistema de aviso EBS do veículo.

O método mais seguro de identificação para utilizar as referências do fabricante da pinça de travão e cruzar referências para identificar a pinça de travão correta de substituição. Se não conseguir fazê-lo, os potenciómetros podem ser identificados como segue:

"On-Off" - O potenciómetro é montado apenas com dois fios (geralmente vermelho/rosa e branco)

"Contínuo" - O potenciómetro é montado com três fios (geralmente vermelho/rosa, branco e amarelo). Os três pinos do potenciómetro são de cor prateada.

MAN "Contínuo MAN" - O potenciómetro é montado com três fios (geralmente vermelho/rosa, branco e amarelo). Os três pinos do potenciómetro são de cor dourada.

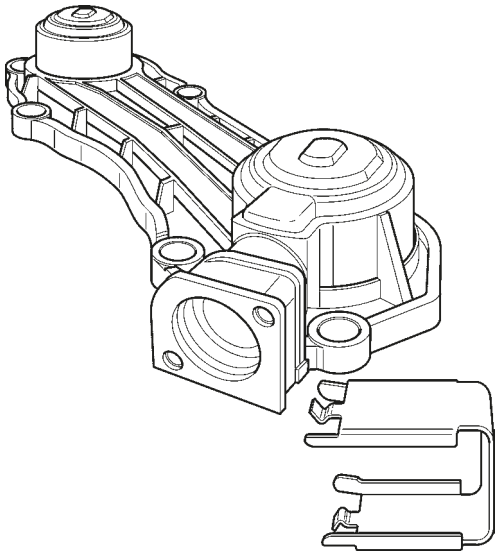
TAMPA DO POTENCIÓMETRO

Existem dois métodos de retenção da ligação do potenciómetro na pinça de travão Knorr:

"Tipo de parafuso"

"Tipo de grampo"

As pinças de travão refabricadas pela Meritor vêm agora com uma tampa de potenciómetro universal adequado a ambos os tipos de assistência.



Este catálogo mostra a designação original de "Parafuso" ou "Grampo" para assegurar que pode corretamente identificar as aplicações para unidades que possa já ter em stock.
