Differential Identification

Identification Plates

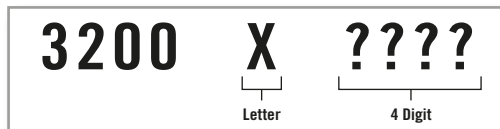

AXLE IDENTIFICATION PLATE

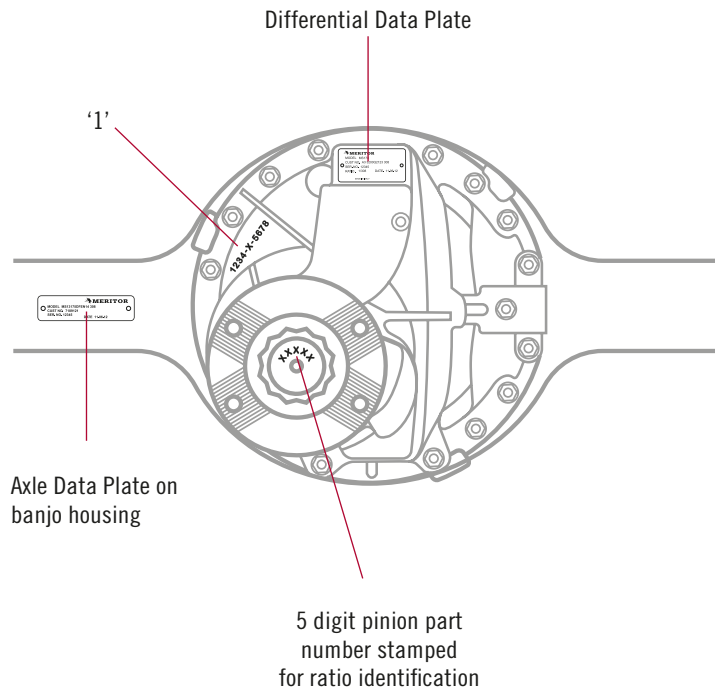

DIFFERENTIAL IDENTIFICATION PLATE

If the plate is missing or not available:
Locate casting reference '1' on main differential case:

IDENTIFICATION TAG LOCATIONS

Part Number Identification

All Meritor differential assembly part numbers comprise of three sections:

e.g.	A38	-	3200	-	W	-	1739	-	308
	Prefix		Base number						Ratio

The prefix number changes from application to application and defines the variable features such as drive coupling type, differential locks etc.

The base number is the same for all differentials assembled within a particular axle range. All Meritor differential Base numbers start with the numbers "3200"

The ratio is given as a 3 digit number directly after the differential part number.

Example: A38 3200W1739-**308**

This would signify that the axle ratio is 3.08:1

Nominal Axle Load Rating (GAWR):

In thousands of pounds.
Individual forwards and rear axle of a tandem set (D, N, P, R) are rated as single axles. A tandem set (T) is rated as the combination of the two axles and a tridem set (Z) as the combination of the three axles.

PRODUCT NOTIFICATION LETTER

40-2

Date: December, 12 2012

Subject: MT610 development with separated bearing caps

Product: RS1352HV; RS1370HV; RTH3312; RSH1370; RTH2610B;
RT2610HV; RTH3212E; RTH3212D; RT3210HV,
RS1365HV; RSH1370E

Forward and rear carriers for MT610 axles will be updated with a new design solution. The current product has a bridge between the two bearing caps, with the planned change this bridge will be removed.

Both old and new carriers will be interchangeable, but after the SOP old P/N can not be ordered.

The introduction of this change is driven by product optimization.
Serial production is planned for week 9/2013.

Exact date and chassis-number will be provided by our Logistic Department.

PRODUCT NOTIFICATION LETTER

40-2

Parts that will be replaced are as follows:

Old p/n	Name	PCS	New p/n	Name	PCS
1524916	Carrier Housing DS70	1	A23200W2415	Carrier Housing DS70	1
A23200F2060	Carrier Housing DS65	1	A23200T2412	Carrier Housing DS65	1
A23200C2057	Carrier Housing DS100	1	A23200S2411	Carrier Housing DS100	1

Assembly instructions will change as follow.

ADJUST AXIAL PLAY OF DIFFERENTIAL BEARINGS.

Solution one: carriers with leg cap bridges

The axial play of the differential bearings is adjusted to 0.05 +/- 0.05mm.

The play is measured after tightening the bolts to 200Nm, tighten another 90 +/- 5 degrees.

No bearing preload is allowed.

PRODUCT NOTIFICATION LETTER

40-2

Solution two: Carriers without leg cap bridges

Tighten the differential bearing caps screws min 40Nm.

- Tighten the crown wheel side bearing adjuster ring while turning the crown wheel by hand. When a resistance is felt at the crown wheel stop tightening the adjuster ring.
- Back off the adjuster ring till the back lash spec is reached (approx. 2 segments/notches).
- Set a DTI gauge at machined surfaces (RL+LU) or (LL+RU) or (LM+RM). Set both DTI gauges to "0". See Figure 1.
- Move to the opposite side of the crown wheel and tighten the bearing adjusting ring until there is movement on the DTI gauges.

NOTE: The bearing cap divergence figure is the combined reading of both DTI gauges.

Example:

(RL) Gauge 1 = 0.12mm

(LU) Gauge 2 = 0.07mm

Bearing cap divergence is, $0.12\text{mm} + 0.07\text{mm} = 0.19\text{mm}$.

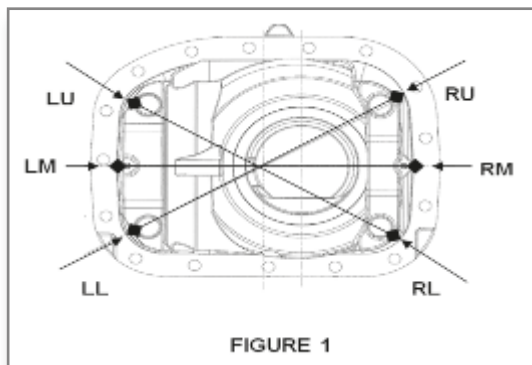

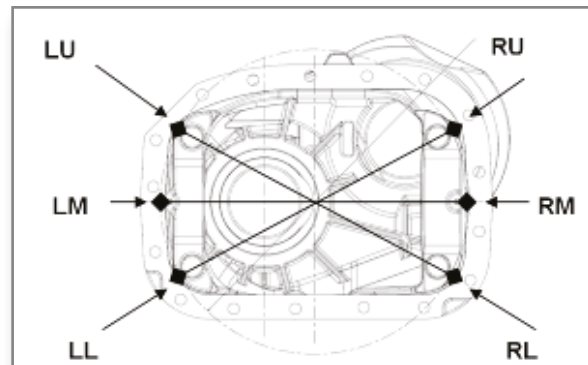

FIGURE 1

- Continue to tighten the bearing adjuster ring until a bearing cap divergence value between 0.05mm and 0.20mm is obtained. Measurements should be taken on (LM+RM) or on both (RU+LL) and (RL+LU) and both have to be inside the tolerance $0.05 \div 0.20$. This will ensure the correct bearing pre-load is achieved,

Tightening the bolts to 200 Nm, tighten another 90 ± 5 degrees.

Diameters (RU, LL) and (RL, LU) should be max 420.90 (for DS70) and max 460.90.

If you have any questions please contact the technical helpline or

PRODUCT NOTIFICATION LETTER

SOLID AXLE SHAFTS

Date: May, 18 2012

Subject: SAS Introduction

Product: MT/MS 610 Family

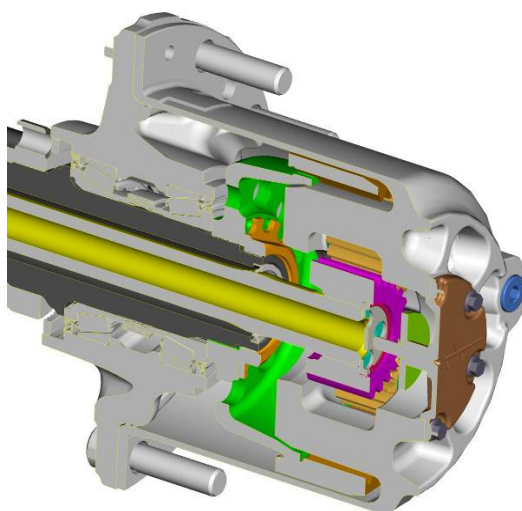

The introduction of solid axle shaft is driven by necessity to improve reliability in product and manufacturing of axle shaft produced as solid. This will introduce an improved oil flow in HR axle using a lower amount of oil. Axle shafts, since not hollow still remain the fuse of the Axle system improving fatigue resistance and reliability in life.

Reason of change: Change axle shaft design from hollow (current) to Solid (new).

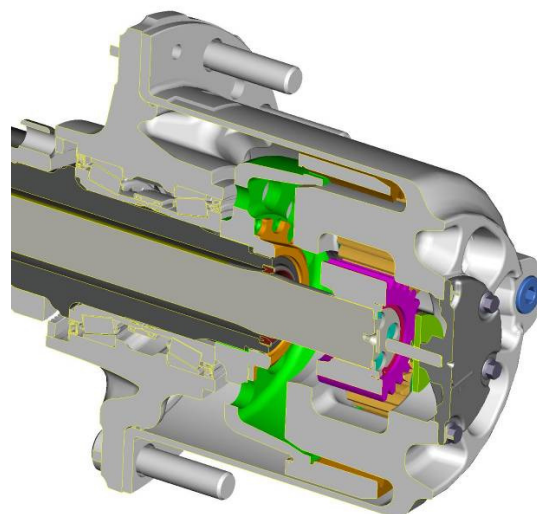

New PN's are created to track the new content in HR. External fittings will be the same as today. No changes in interfaces. The new content will be: Solid Axle Shaft, Axial breathing Seal, new reinforced Hub cover and modified axle housing due to a lower position oil filling plug.

New Bare/Fully dressed axles are released to clearly identify those new contents.

Illustration of new content and modified parts:

PRODUCT NOTIFICATION LETTER

SOLID AXLE SHAFTS

Date: March, 2017

Subject: Non SAS housings

Product: MT/MS 610 Family

Retrofit: Change axle shaft design from hollow (current) to Solid (new) without housing replacement

When replacing hollow shafts with solid shafts, it is necessary to change seal and hub cover as well, as described in the part number list below.

When the axle is reassembled, oil should be charged 20mm below filler plug.

Differential Identification

Identification Plates

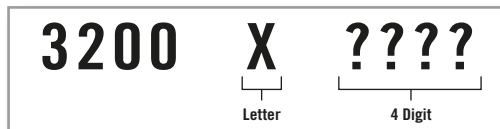

AXLE IDENTIFICATION PLATE

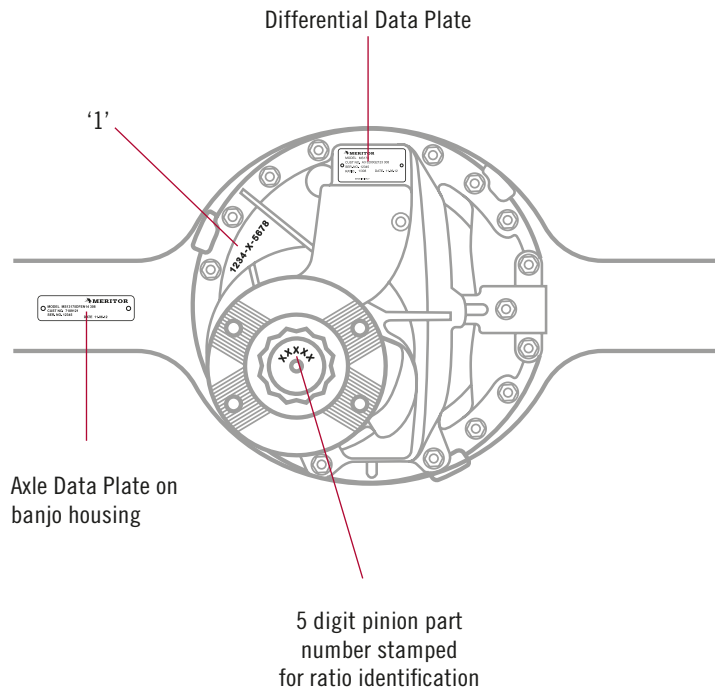

DIFFERENTIAL IDENTIFICATION PLATE

If the plate is missing or not available:
Locate casting reference '1' on main differential case:

IDENTIFICATION TAG LOCATIONS

Part Number Identification

All Meritor differential assembly part numbers comprise of three sections:

e.g.	A38	-	3200	-	W	-	1739	-	308
	Prefix		Base number					Ratio	

The prefix number changes from application to application and defines the variable features such as drive coupling type, differential locks etc.

The base number is the same for all differentials assembled within a particular axle range. All Meritor differential Base numbers start with the numbers "3200"

The ratio is given as a 3 digit number directly after the differential part number.

Example: A38 3200W1739-**308**

This would signify that the axle ratio is 3.08:1

Nominal Axle Load Rating (GAWR):

In thousands of pounds.
Individual forwards and rear axle of a tandem set (D, N, P, R) are rated as single axles. A tandem set (T) is rated as the combination of the two axles and a tridem set (Z) as the combination of the three axles.

PRODUCT NOTIFICATION LETTER

40-2

Date: December, 12 2012

Subject: MT610 development with separated bearing caps

Product: RS1352HV; RS1370HV; RTH3312; RSH1370; RTH2610B;
RT2610HV; RTH3212E; RTH3212D; RT3210HV,
RS1365HV; RSH1370E

Forward and rear carriers for MT610 axles will be updated with a new design solution. The current product has a bridge between the two bearing caps, with the planned change this bridge will be removed.

Both old and new carriers will be interchangeable, but after the SOP old P/N can not be ordered.

The introduction of this change is driven by product optimization.
Serial production is planned for week 9/2013.

Exact date and chassis-number will be provided by our Logistic Department.

PRODUCT NOTIFICATION LETTER

40-2

Parts that will be replaced are as follows:

Old p/n	Name	PCS	New p/n	Name	PCS
1524916	Carrier Housing DS70	1	A23200W2415	Carrier Housing DS70	1
A23200F2060	Carrier Housing DS65	1	A23200T2412	Carrier Housing DS65	1
A23200C2057	Carrier Housing DS100	1	A23200S2411	Carrier Housing DS100	1

Assembly instructions will change as follow.

ADJUST AXIAL PLAY OF DIFFERENTIAL BEARINGS.

Solution one: carriers with leg cap bridges

The axial play of the differential bearings is adjusted to 0.05 +/- 0.05mm.

The play is measured after tightening the bolts to 200Nm, tighten another 90 +/- 5 degrees.

No bearing preload is allowed.

PRODUCT NOTIFICATION LETTER

40-2

Solution two: Carriers without leg cap bridges

Tighten the differential bearing caps screws min 40Nm.

- Tighten the crown wheel side bearing adjuster ring while turning the crown wheel by hand. When a resistance is felt at the crown wheel stop tightening the adjuster ring.
- Back off the adjuster ring till the back lash spec is reached (approx. 2 segments/notches).
- Set a DTI gauge at machined surfaces (RL+LU) or (LL+RU) or (LM+RM). Set both DTI gauges to "0". See Figure 1.
- Move to the opposite side of the crown wheel and tighten the bearing adjusting ring until there is movement on the DTI gauges.

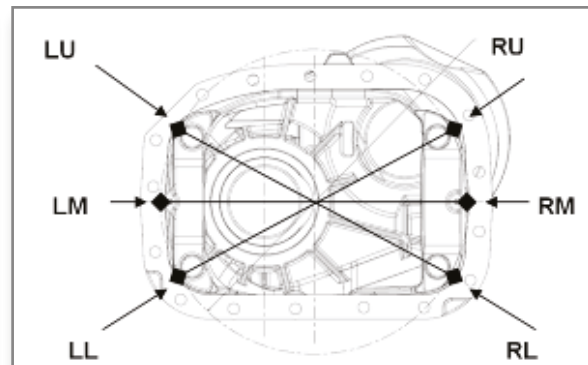

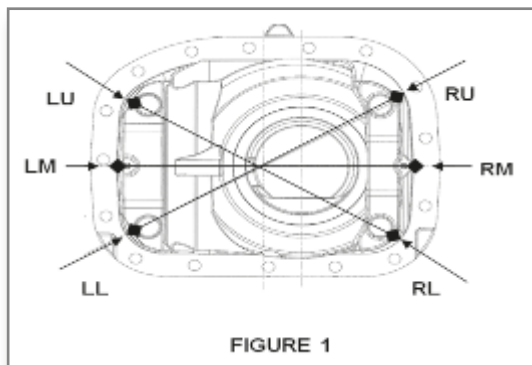

NOTE: The bearing cap divergence figure is the combined reading of both DTI gauges.

Example:

(RL) Gauge 1 = 0.12mm

(LU) Gauge 2 = 0.07mm

Bearing cap divergence is, $0.12\text{mm} + 0.07\text{mm} = 0.19\text{mm}$.

- Continue to tighten the bearing adjuster ring until a bearing cap divergence value between 0.05mm and 0.20mm is obtained. Measurements should be taken on (LM+RM) or on both (RU+LL) and (RL+LU) and both have to be inside the tolerance $0.05 \div 0.20$. This will ensure the correct bearing pre-load is achieved,

Tightening the bolts to 200 Nm, tighten another 90 ± 5 degrees.

Diameters (RU, LL) and (RL, LU) should be max 420.90 (for DS70) and max 460.90.

If you have any questions please contact the technical helpline or

PRODUCT NOTIFICATION LETTER

SOLID AXLE SHAFTS

Date: May, 18 2012

Subject: SAS Introduction

Product: MT/MS 610 Family

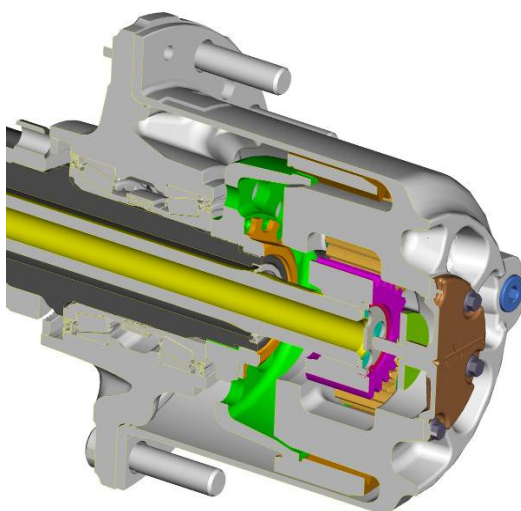

The introduction of solid axle shaft is driven by necessity to improve reliability in product and manufacturing of axle shaft produced as solid. This will introduce an improved oil flow in HR axle using a lower amount of oil. Axle shafts, since not hollow still remain the fuse of the Axle system improving fatigue resistance and reliability in life.

Reason of change: Change axle shaft design from hollow (current) to Solid (new).

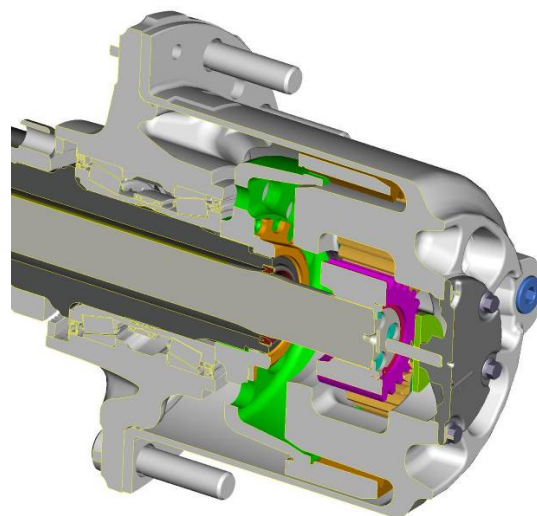

New PN's are created to track the new content in HR. External fittings will be the same as today. No changes in interfaces. The new content will be: Solid Axle Shaft, Axial breathing Seal, new reinforced Hub cover and modified axle housing due to a lower position oil filling plug.

New Bare/Fully dressed axles are released to clearly identify those new contents.

Illustration of new content and modified parts:

PRODUCT NOTIFICATION LETTER

SOLID AXLE SHAFTS

Date: March, 2017

Subject: Non SAS housings

Product: MT/MS 610 Family

Retrofit: Change axle shaft design from hollow (current) to Solid (new) without housing replacement

When replacing hollow shafts with solid shafts, it is necessary to change seal and hub cover as well, as described in the part number list below.

When the axle is reassembled, oil should be charged 20mm below filler plug.

Part Number Affected:

Hollow Shaft Version Solid Shaft Version

Axle Shaft:

3191860	3206Y2183
3191861	3206Z2184
3191862	3206A2185
3191863	3206B2186
3191864	3206C2187
3191865	3206D2188
3191866	3206E2189
3191867	3206F2190
3206M2067	3206K2351
3206N2068	3206L2352
3206B1978	3206D2370
3206C1979	3206E2371

Axial Seal:

1522373	A-1205J2844

Hub cover:

3192819	3266U1685

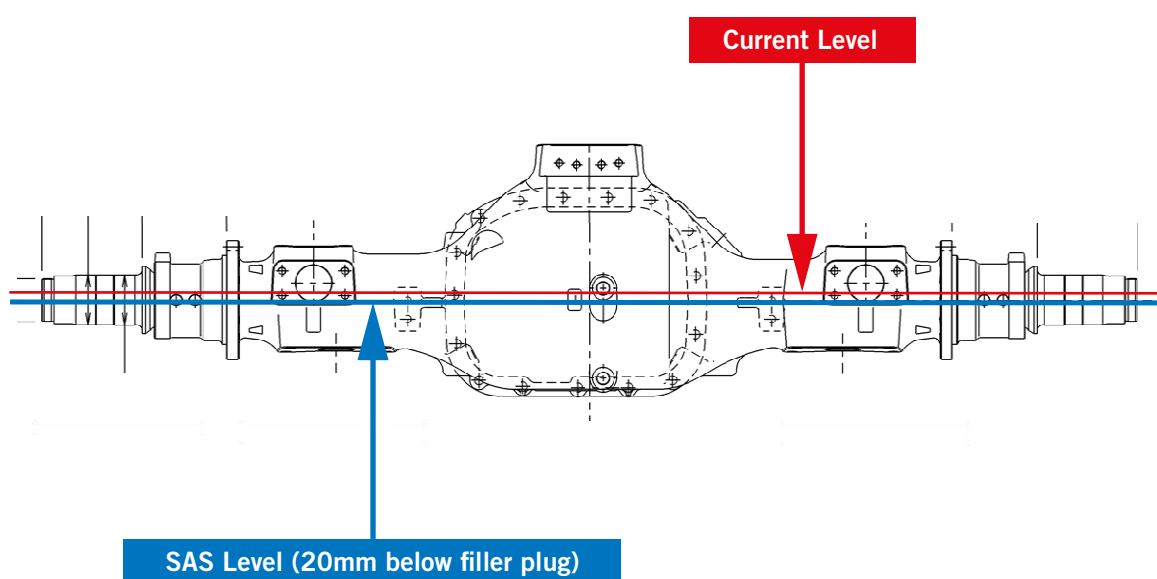

PRODUCT NOTIFICATION LETTER

SOLID AXLE SHAFTS

Illustration of oil filling level

Differential Identification

Identification Plates

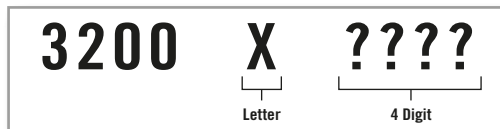

AXLE IDENTIFICATION PLATE

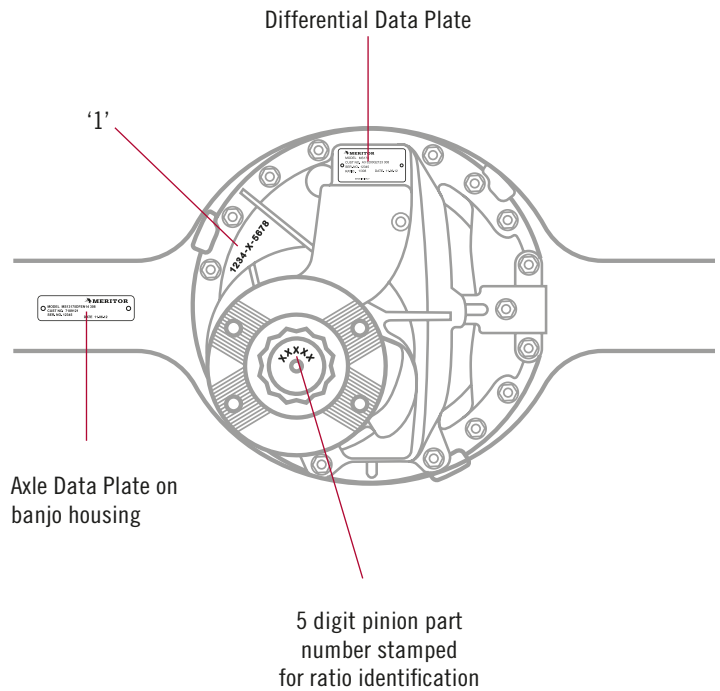

DIFFERENTIAL IDENTIFICATION PLATE

If the plate is missing or not available:
Locate casting reference '1' on main differential case:

IDENTIFICATION TAG LOCATIONS

Part Number Identification

All Meritor differential assembly part numbers comprise of three sections:

e.g.	A38	-	3200	-	W	-	1739	-	308
	Prefix		Base number						Ratio

The prefix number changes from application to application and defines the variable features such as drive coupling type, differential locks etc.

The base number is the same for all differentials assembled within a particular axle range. All Meritor differential Base numbers start with the numbers "3200"

The ratio is given as a 3 digit number directly after the differential part number.

Example: A38 3200W1739-**308**

This would signify that the axle ratio is 3.08:1

Nominal Axle Load Rating (GAWR):

In thousands of pounds.
Individual forwards and rear axle of a tandem set (D, N, P, R) are rated as single axles. A tandem set (T) is rated as the combination of the two axles and a tridem set (Z) as the combination of the three axles.

Carrier Variation

A = Aluminum
D = Ductile
M = Ductile Rear (Amboid)
N = No Carrier
R = Ductile Front Drive Axle

Relative Gearing Size or Series

0 = No Gearing
1 = 292/347
2 = 337/387
3 = TBD
4 = 381/432
5 = 415/432
6 = 432/457
7 = 457
8 = 460/498

Wheel End / Brake Attachment / Differential

A = Conventional Spindle / Conventional Brake / Standard Diff
B = Conventional Spindle / Conventional Brake / DCDL
C = Conventional Spindle / Conventional Brake / No-Spin
D = Conventional Spindle / Conventional Brake / Other Diff
E = Unitized Spindle / Conventional Brake / Standard Diff
F = Unitized Spindle / Conventional Brake / DCDL
G = Unitized Spindle / Conventional Brake / No-Spin
H = Unitized Spindle / Conventional Brake / Other Diff
J = Conventional Spindle / Integral Brake / Standard Diff
K = Conventional Spindle / Integral Brake / DCDL
L = Conventional Spindle / Integral Brake / No-Spin
M = Conventional Spindle/Integral Brake / Other Diff
N = Unitized Spindle / Integral Brake / Standard Diff
P = Unitized Spindle / Integral Brake / DCDL
Q = Unitized Spindle / Integral Brake / No-Spin
R = Unitized Spindle / Integral Brake / Other Diff
S = Bolt on Conventional Spindle / Conventional Brake / No Diff

PRODUCT NOTIFICATION LETTER

40-2

Date: December, 12 2012

Subject: MT610 development with separated bearing caps

Product: RS1352HV; RS1370HV; RTH3312; RSH1370; RTH2610B;
RT2610HV; RTH3212E; RTH3212D; RT3210HV,
RS1365HV; RSH1370E

Forward and rear carriers for MT610 axles will be updated with a new design solution. The current product has a bridge between the two bearing caps, with the planned change this bridge will be removed.

Both old and new carriers will be interchangeable, but after the SOP old P/N can not be ordered.

The introduction of this change is driven by product optimization.
Serial production is planned for week 9/2013.

Exact date and chassis-number will be provided by our Logistic Department.

PRODUCT NOTIFICATION LETTER

40-2

Parts that will be replaced are as follows:

Old p/n	Name	PCS	New p/n	Name	PCS
1524916	Carrier Housing DS70	1	A23200W2415	Carrier Housing DS70	1
A23200F2060	Carrier Housing DS65	1	A23200T2412	Carrier Housing DS65	1
A23200C2057	Carrier Housing DS100	1	A23200S2411	Carrier Housing DS100	1

Assembly instructions will change as follow.

ADJUST AXIAL PLAY OF DIFFERENTIAL BEARINGS.

Solution one: carriers with leg cap bridges

The axial play of the differential bearings is adjusted to 0.05 +/- 0.05mm.

The play is measured after tightening the bolts to 200Nm, tighten another 90 +/- 5 degrees.

No bearing preload is allowed.

PRODUCT NOTIFICATION LETTER

40-2

Solution two: Carriers without leg cap bridges

Tighten the differential bearing caps screws min 40Nm.

- Tighten the crown wheel side bearing adjuster ring while turning the crown wheel by hand. When a resistance is felt at the crown wheel stop tightening the adjuster ring.
- Back off the adjuster ring till the back lash spec is reached (approx. 2 segments/notches).
- Set a DTI gauge at machined surfaces (RL+LU) or (LL+RU) or (LM+RM). Set both DTI gauges to "0". See Figure 1.
- Move to the opposite side of the crown wheel and tighten the bearing adjusting ring until there is movement on the DTI gauges.

NOTE: The bearing cap divergence figure is the combined reading of both DTI gauges.

Example:

(RL) Gauge 1 = 0.12mm

(LU) Gauge 2 = 0.07mm

Bearing cap divergence is, $0.12\text{mm} + 0.07\text{mm} = 0.19\text{mm}$.

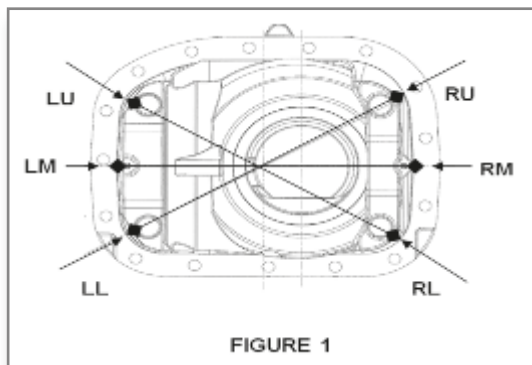

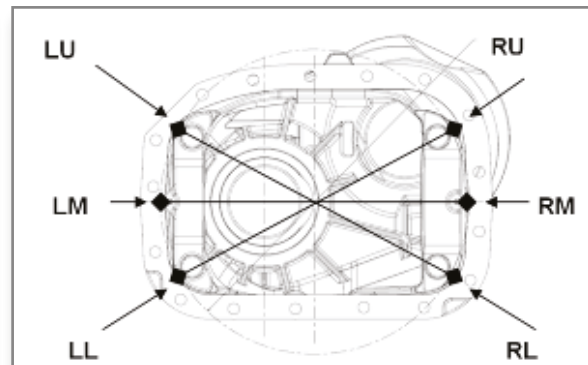

FIGURE 1

- Continue to tighten the bearing adjuster ring until a bearing cap divergence value between 0.05mm and 0.20mm is obtained. Measurements should be taken on (LM+RM) or on both (RU+LL) and (RL+LU) and both have to be inside the tolerance $0.05 \div 0.20$. This will ensure the correct bearing pre-load is achieved,

Tightening the bolts to 200 Nm, tighten another 90 ± 5 degrees.

Diameters (RU, LL) and (RL, LU) should be max 420.90 (for DS70) and max 460.90.

If you have any questions please contact the technical helpline or

PRODUCT NOTIFICATION LETTER

SOLID AXLE SHAFTS

Date: May, 18 2012

Subject: SAS Introduction

Product: MT/MS 610 Family

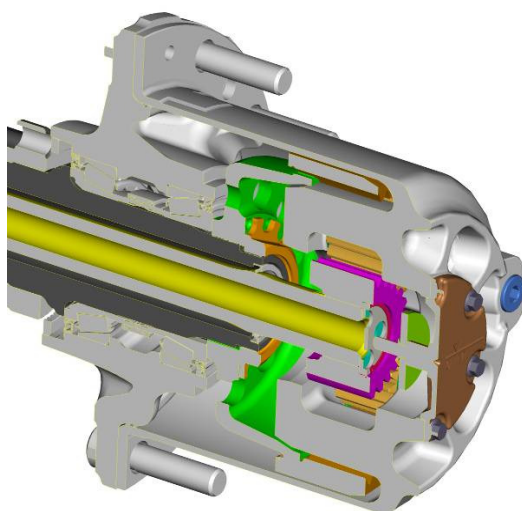

The introduction of solid axle shaft is driven by necessity to improve reliability in product and manufacturing of axle shaft produced as solid. This will introduce an improved oil flow in HR axle using a lower amount of oil. Axle shafts, since not hollow still remain the fuse of the Axle system improving fatigue resistance and reliability in life.

Reason of change: Change axle shaft design from hollow (current) to Solid (new).

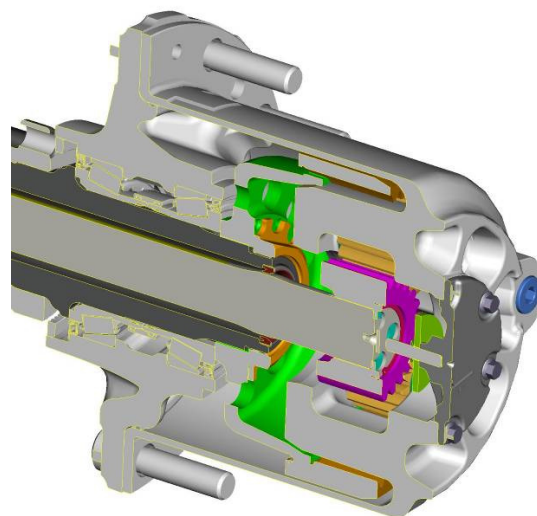

New PN's are created to track the new content in HR. External fittings will be the same as today. No changes in interfaces. The new content will be: Solid Axle Shaft, Axial breathing Seal, new reinforced Hub cover and modified axle housing due to a lower position oil filling plug.

New Bare/Fully dressed axles are released to clearly identify those new contents.

Illustration of new content and modified parts:

Current Hollow Shaft Design

PRODUCT NOTIFICATION LETTER

SOLID AXLE SHAFTS

Date: March, 2017

Subject: Non SAS housings

Product: MT/MS 610 Family

Retrofit: Change axle shaft design from hollow (current) to Solid (new) without housing replacement

When replacing hollow shafts with solid shafts, it is necessary to change seal and hub cover as well, as described in the part number list below.

When the axle is reassembled, oil should be charged 20mm below filler plug.

Part Number Affected:

Hollow Shaft Version Solid Shaft Version

The diagram illustrates the six steps of the design process, each represented by a number and a set of icons:

- 1 Problem**: Represented by a document icon with a pencil.
- 2 Research**: Represented by a lightbulb icon (idea) and a magnifying glass icon (research).
- 3 Ideation**: Represented by a lightbulb icon (idea) and a trash can icon (discarding ideas).
- 4 Prototyping**: Represented by a 3D printer icon (building a prototype) and a paper airplane icon (testing a prototype).
- 5 Testing**: Represented by a gear icon (iteration) and a paper airplane icon (testing a prototype).
- 6 Iteration**: Represented by a large 'X' icon (failure/iteration) and a paper airplane icon (testing a prototype).

   **3.6-3.7**

Differential Identification

Identification Plates

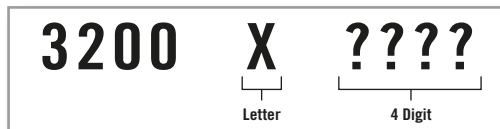

AXLE IDENTIFICATION PLATE

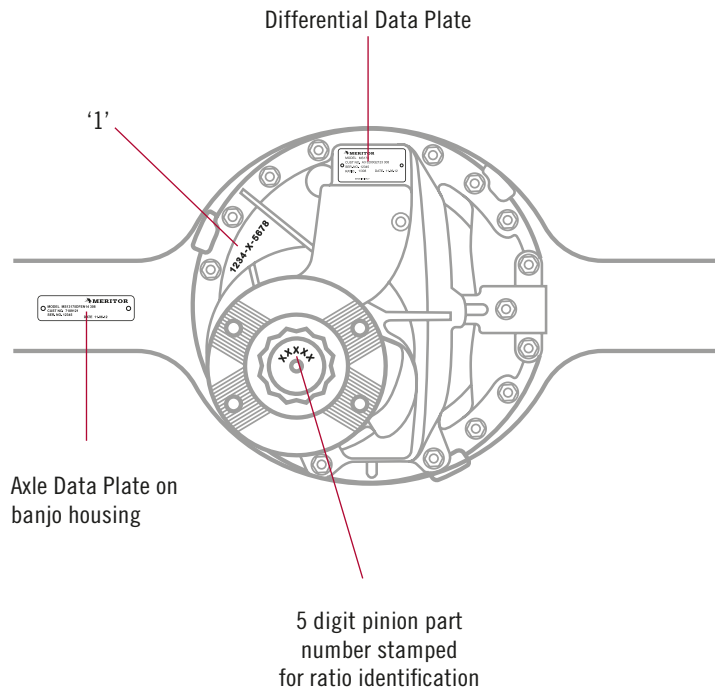

DIFFERENTIAL IDENTIFICATION PLATE

If the plate is missing or not available:
Locate casting reference '1' on main differential case:

IDENTIFICATION TAG LOCATIONS

Part Number Identification

All Meritor differential assembly part numbers comprise of three sections:

e.g.	A38	-	3200	-	W	-	1739	-	308
	Prefix		Base number						Ratio

The prefix number changes from application to application and defines the variable features such as drive coupling type, differential locks etc.

The base number is the same for all differentials assembled within a particular axle range. All Meritor differential Base numbers start with the numbers "3200"

The ratio is given as a 3 digit number directly after the differential part number.

Example: A38 3200W1739-**308**

This would signify that the axle ratio is 3.08:1

Nominal Axle Load Rating (GAWR):

In thousands of pounds.
Individual forwards and rear axle of a tandem set (D, N, P, R) are rated as single axles. A tandem set (T) is rated as the combination of the two axles and a tridem set (Z) as the combination of the three axles.

PRODUCT NOTIFICATION LETTER

40-2

Date: December, 12 2012

Subject: MT610 development with separated bearing caps

Product: RS1352HV; RS1370HV; RTH3312; RSH1370; RTH2610B;
RT2610HV; RTH3212E; RTH3212D; RT3210HV,
RS1365HV; RSH1370E

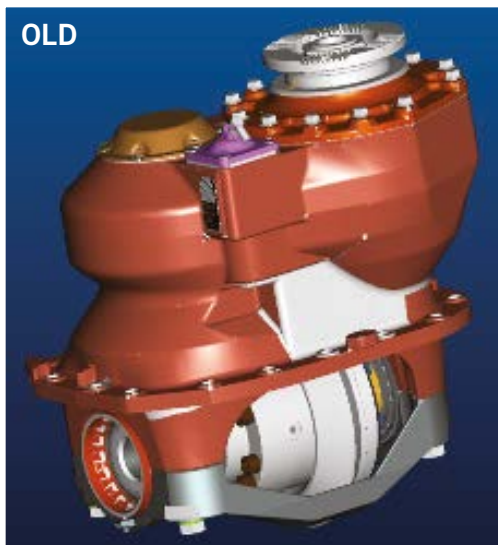

Forward and rear carriers for MT610 axles will be updated with a new design solution. The current product has a bridge between the two bearing caps, with the planned change this bridge will be removed.

Both old and new carriers will be interchangeable, but after the SOP old P/N can not be ordered.

The introduction of this change is driven by product optimization.
Serial production is planned for week 9/2013.

Exact date and chassis-number will be provided by our Logistic Department.

PRODUCT NOTIFICATION LETTER

40-2

Parts that will be replaced are as follows:

Old p/n	Name	PCS	New p/n	Name	PCS
1524916	Carrier Housing DS70	1	A23200W2415	Carrier Housing DS70	1
A23200F2060	Carrier Housing DS65	1	A23200T2412	Carrier Housing DS65	1
A23200C2057	Carrier Housing DS100	1	A23200S2411	Carrier Housing DS100	1

Assembly instructions will change as follow.

ADJUST AXIAL PLAY OF DIFFERENTIAL BEARINGS.

Solution one: carriers with leg cap bridges

The axial play of the differential bearings is adjusted to 0.05 +/- 0.05mm.

The play is measured after tightening the bolts to 200Nm, tighten another 90 +/- 5 degrees.

No bearing preload is allowed.

MERITOR
RUN WITH THE BULL

PRODUCT NOTIFICATION LETTER

40-2

Solution two: Carriers without leg cap bridges

Tighten the differential bearing caps screws min 40Nm.

- Tighten the crown wheel side bearing adjuster ring while turning the crown wheel by hand. When a resistance is felt at the crown wheel stop tightening the adjuster ring.
- Back off the adjuster ring till the back lash spec is reached (approx. 2 segments/notches).
- Set a DTI gauge at machined surfaces (RL+LU) or (LL+RU) or (LM+RM). Set both DTI gauges to "0". See Figure 1.
- Move to the opposite side of the crown wheel and tighten the bearing adjusting ring until there is movement on the DTI gauges.

NOTE: The bearing cap divergence figure is the combined reading of both DTI gauges.

Example:

(RL) Gauge 1 = 0.12mm

(LU) Gauge 2 = 0.07mm

Bearing cap divergence is, $0.12\text{mm} + 0.07\text{mm} = 0.19\text{mm}$.

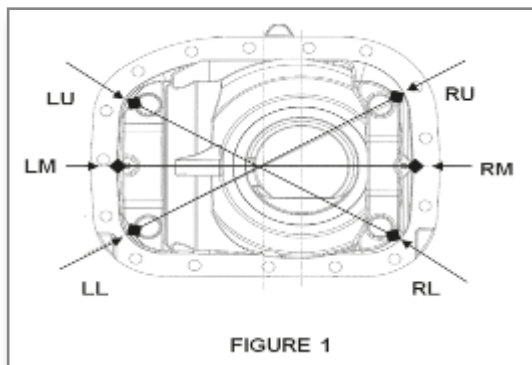

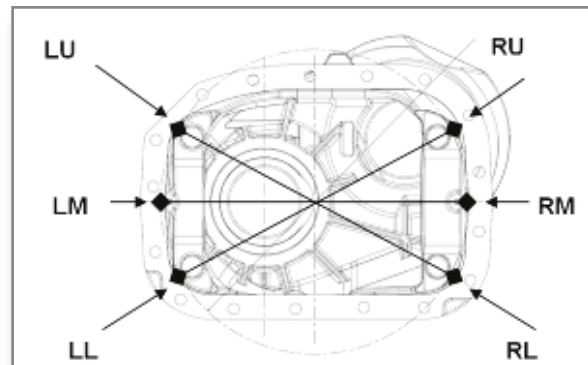

FIGURE 1

- Continue to tighten the bearing adjuster ring until a bearing cap divergence value between 0.05mm and 0.20mm is obtained. Measurements should be taken on (LM+RM) or on both (RU+LL) and (RL+LU) and both have to be inside the tolerance $0.05 \div 0.20$. This will ensure the correct bearing pre-load is achieved,

Tightening the bolts to 200 Nm, tighten another 90 ± 5 degrees.

Diameters (RU, LL) and (RL, LU) should be max 420.90 (for DS70) and max 460.90.

If you have any questions please contact the technical helpline or
Erminio Pillitu, Senior Manager Business Line EMEA - Axles and Differentials

erminio.pillitu@meritor.com

PRODUCT NOTIFICATION LETTER

SOLID AXLE SHAFTS

Date: May, 18 2012

Subject: SAS Introduction

Product: MT/MS 610 Family

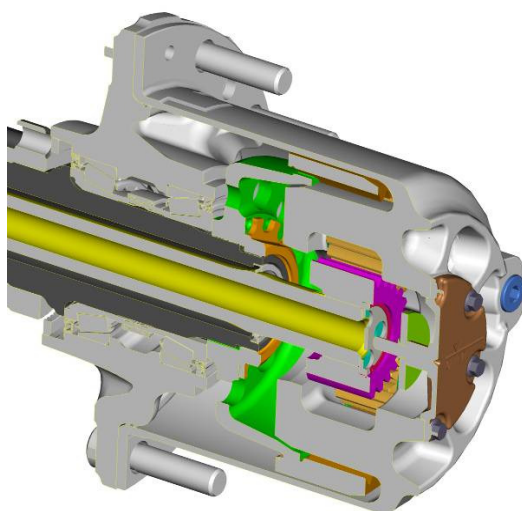

The introduction of solid axle shaft is driven by necessity to improve reliability in product and manufacturing of axle shaft produced as solid. This will introduce an improved oil flow in HR axle using a lower amount of oil. Axle shafts, since not hollow still remain the fuse of the Axle system improving fatigue resistance and reliability in life.

Reason of change: Change axle shaft design from hollow (current) to Solid (new).

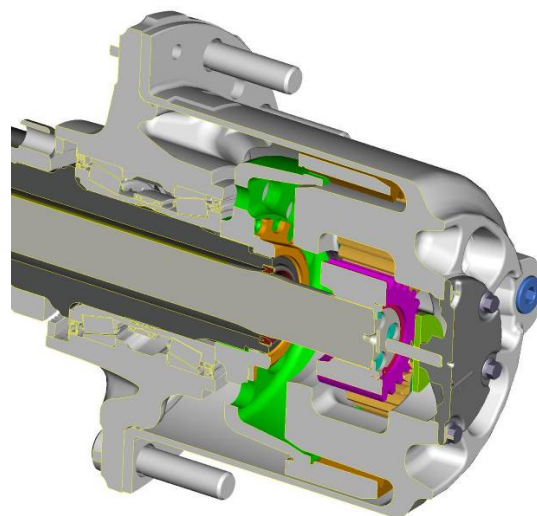

New PN's are created to track the new content in HR. External fittings will be the same as today. No changes in interfaces. The new content will be: Solid Axle Shaft, Axial breathing Seal, new reinforced Hub cover and modified axle housing due to a lower position oil filling plug.

New Bare/Fully dressed axles are released to clearly identify those new contents.

Illustration of new content and modified parts:

PRODUCT NOTIFICATION LETTER

SOLID AXLE SHAFTS

Date: March, 2017

Subject: Non SAS housings

Product: MT/MS 610 Family

Retrofit: Change axle shaft design from hollow (current) to Solid (new) without housing replacement

When replacing hollow shafts with solid shafts, it is necessary to change seal and hub cover as well, as described in the part number list below.

When the axle is reassembled, oil should be charged 20mm below filler plug.

Part Number Affected:
